SECTION 28. TYPE NUMBERS WITH MILITARY SPECIFICATIONS

For additional information on military qualified devices, please refer to D.A.T.A.'s Military Electronics Devices Guide.

This Guide is published quarterly to correspond to the most recent QPL revisions. The latest edition contains information on more than 20,000 military qualified ICs and semiconductors.

The 3 microcircuit product selection sections, MIL-M-38510, DESC drawings and MIL-STD-883 are sorted by device function and cross indexed for easy access to the device information and standard outline drawings. MIL-S-19500 semiconductors are also sorted, listed, indexed, and reference a series of standard case outline drawings.

All military qualified manufacturers are listed within their respective sections, indicating D.A.T.A. mfr. code, government code, FSCM No., logo, and plant locations.

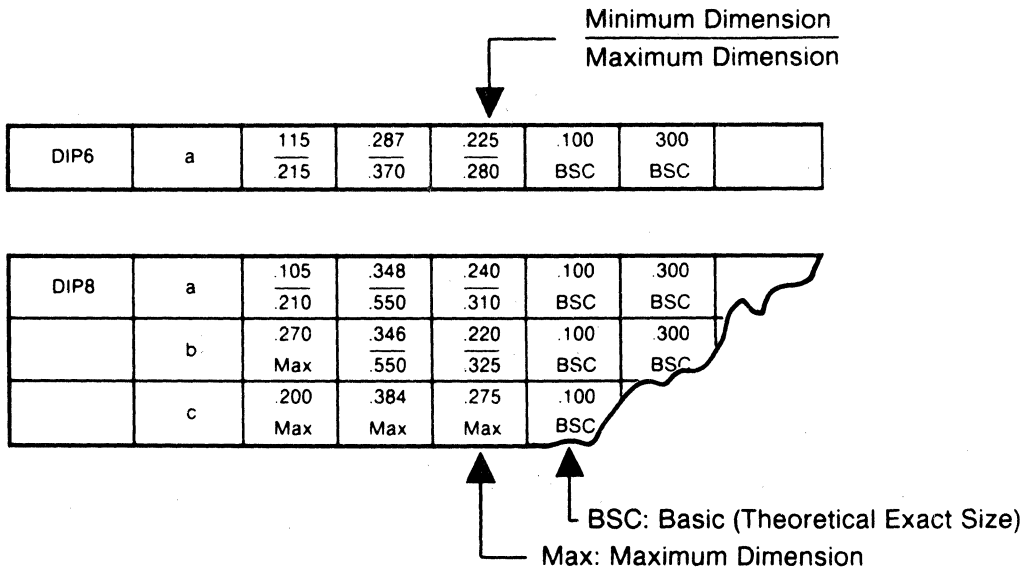
How to use the Outline Drawing Charts



30. OUTLINE DRAWINGS

OUTLINE DRAWING COLUMN ——— (Letter Prefix)

The outline drawings are arranged by package type, serial number and variations. The following is an example:

FL 16 a
Package Type Serial Variation

CH – Unpackaged Die or Chip
CN – Metallic Can
DIP – Dual-Inline Package (DIP)
FP – Flatpack and Small Outline (SO)
LC – Leaded and Leadless Chip Carriers (LDCC and LLCC)
MD – Proprietary Modular Package
MO – JEDEC-Registered MO-series Package
MS – JEDEC-Registered MS-series Package
QUIP – Quad-Inline Package (QUIP)
PGA – Pin Grid Array (PGA)
SL – Single-Inline Package (SIP)
TO – JEDEC-Registered TO-series Package

NOTES

The serial numbers of all DIPs, QUIPs, and SOs are the same as their pin count. The symbol to the right of any drawing number indicates that the dimensioned drawing is not yet available and that the serial number coincides with the pin count.

As processing and technology improve, many manufacturers refine their packages to offer new opportunities to component users. While the illustrations on the following pages are suitable for most reference, users requiring more accurate or more current packaging documentation are referred to their supplier.

All drawings shown are referenced in the Technical Sections of this D.A.T.A.BOOK and, with the exception of JEDEC-registered outlines, are reproduced from manufacturer literature. The "MO-" and "TO-" series drawings are reproduced from JEDEC Publication No. 95: JEDEC Registered and Standard Outlines for Solid State Products.

NOTES:
1. Refer to JEDEC Publication No. 13 for Rules for Dimensioning Peripheral Lead Outlines.
2. Leads within 0.005" (0.12 mm) radius of True Position (TP) at maximum material condition.
3. N is the maximum quantity of lead positions.
4. Z and Z1 determine a zone within which all body and lead irregularities lie.

NOTES:
1. Dimensions shall be measured in inches. Metric equivalents (to the nearest .01 mm) are given for general information only and are based upon 1 inch = 25.4 mm.
2. Index area; a notch or a dot shall be located adjacent to pin 1 and shall be within the shaded area delimited by pin 3 and package center. Alternately, a tab (dim. k) may be used to identify lead no. 1.
3. Dimension Q shall be measured at the point of exit of the lead from the body.
4. This dimension allows for off-center lid, meniscus and glass overrun.
5. The true-position pin spacing is .050 (1.27 mm) between centerlines. Each pin centerline is located within ± .005 (.13 mm) of its true longitudinal position relative to pins 1 and 10 of outline A and pins 1 and 14 of outline B.
6. Equipment designers should allow for interchangeable replacement of any size package that could be supplied to this specification.

NOTES:

1. Refer to applicable symbol list.
2. Dimensioning and tolerancing per ANSI Y14.5-1973.
3. Leads within .005 radius of True Position (TP) at gauge plane with maximum material condition and unit installed.
4. e_1 and e_A applies in zone L_2 when unit installed.
5. α applies to spread leads prior to installation.
6. N is the maximum quantity of lead positions.
7. N_1 is the allowable quantity of missing leads.
8. E_1 does not include mold flash.
9. Outlines on which the seating plane is coincident with the base plane (A_1 = 0) terminal lead stand-offs are not required, A_1 and B_1 may equal B along any part of the lead above the seating/base plane.
10. Controlling Dimension: INCH

NOTES:

1. Refer to applicable symbol list.
2. Dimensioning and tolerancing per ANSI Y14.5-1973.
3. Leads within .127 radius of True Position (TP) at gauge plane with maximum material condition and unit installed.
4. e_1 and e_A applies in zone L_2 when unit installed.
5. α applies to spread leads prior to installation.
6. N is the maximum quantity of lead positions.
7. N_1 is the allowable quantity of missing leads.
8. E_1 does not include mold flash.
9. Outlines on which the seating plane is coincident with the base plane (A_1 = 0) terminal lead stand-offs are not required, and B_1 may equal B along any part of the lead above the seating/base plane.

JEDEC "MO" DRAWING NOTES

1. Refer to rules for dimensioning axial lead product outlines.
2. Refer to rules for dimensioning peripherial lead outlines.
3. Leads within .005 radius of true position (TP) at gauge plane with maximum material condition and unit installed.
4. Leads within .003 or .007 radius of true position (TP) at gauge plane with maximum material condition.
5. Apply in zone measured .000 to .030 when unit installed. Leads within .005 radius of (TP) at gauge plane with maximum material condition.
6. Applies to spread leads prior to installation.
7. Dimension .016 to .019 applies between dimensions .000 to .050 and .250 to .500. Dimension .016 to .021 applies between dimensions .250 to .500 and .500 from seating plane. Diameter is uncontrolled in dimension .000 to .050 and beyond dimension .500.
8. Measured from maximum diameter of device.
9. These dimensions determine a zone within which all body and lead irregularities lie.
10. Body stand off four places, spherical radius on seating surface. Terminal lead stand offs omitted.
11. The body stand off group is centered on the module and the stand offs shall be within a .010 radius of their TP measured at gauge plane.
12. Mechanical index.
13. Radius three sides.
14. Draft four sides.
15. Either numeric or Alpha-numeric terminal lead designation system may be used for this outline. Alpha-numeric system is preferred.
16. Terminal lead stand off, four places. Centered on pin within .006. Body stand offs omitted.
17. Contour within dotted outline optional.
18. The dimension .016 to .019 applies between the dimensions .025 max and .070 min. Diameter is uncontrolled within the .025 dimension.
19. When base of body is to be attached to heat sink, terminal lead stand offs are not required and Dim. B equals 0. When Dim. B equals 0, the leads emerge from the body with the D dim. and reduce to the C dim. above the seating plane.
20. Contour optional.
21. Pin spacing is .100 TP except for outer most rows where spacing is 1.5x.100 TP. (For example - spacing between pin #64 and #1 is .150 TP, where as spacing between pin #1 and #2 and #3, etc. is .100 TP.)
22. Typical all sides.
23. Terminal lead shall be within .203 mm radius of their TP measured at gauge plane.
24. Visual index position relates to JEDEC outline TO-69. Visual index located within index area is preferred.
25. Distance between lead centerlines.

1. Maximum number of leads omitted in this outline, Three (3). The number and position of present are indicated in the product registration. Outline designation determined by the location and minimum angular spacing of any two adjacent leads.
2. (All leads) Diameter is uncontrolled to .050 from seating plane and beyond minimum tolerance of lead length (1.5 or .5) from seating plane. Dim. A applies between .050 and .250 from seating plane. Dim. B applies between .250 and minimum tolerance of lead length from seating plane.
3. Measured from maximum diameter of the actual device.
4. Leads having maximum diameter .019 (.483MM) measured in gaging plane .054 (1.37MM) - .001 (.025MM) - .000 (.00MM) below the seating plane of the product shall be within .007 (.178MM) of their true position relative to a maximum width tab.
5. The product may be measured by direct methods or by gage.
6. Tab centerline.
7. Lead dimensions uncontrolled in this zone to allow for body and lead finish irregularities.
8. Leads missing from their designated positions shall also be counted when numbering leads for specific applications.
9. Spacing and angle of the end leads at the point of emergence of body is not controlled.
10. Leads spacing shall be measured within .030 (.762MM) from the point of emergence from the body or, as in the case of end lead, from the point where the extension of the body outline intersects the end leads.
11. Mechanical index, optional.
12. Maximum number of leads omitted in this outline, One (1). The number and position of leads actually present are indicated in the product registration. Outline designation determined by the location and minimum angular spacing of any two adjacent leads.
13. Irregularity in body outline not controlled in this zone.
14. Maximum number of leads omitted in this outline, None (0). The number and position of leads actually present are indicated in the product registration. Outline designation determined by the location and minimum angular or linear spacing of any two adjacent leads.
15. Overall installed width.
16. Index to be visible from top, this end only.
17. Lead transition geometry from .015/.023 to .030/.070 optional on body side of seating plane.
18. Installed position of lead centers.
19. (All leads) .016/.019 applies between .050 max. and .250 min. .016/.021 applies between .250 min. and .500 (12.70MM) from reference plane. Diameter is uncontrolled in .050 max. and beyond .500 (12.70MM) from reference plane.
20. Contour of package beyond this zone optional, but must be confined with .310/.330 and .120/.240.
21. Contour and orientation of fixed terminal lugs are undefined.
22. The body and terminals of the device, with the exception of the extended lug length .650 max and .575 max, lies within the cylinder defined by 1.227 max. and length 1.810 max.
23. A chamfer (or undercut) on one or both ends of the hexagonal portions is optional.
24. Length of incomplete or undercut threads of dim. .425 min and .499 max.
25. Pitch dia. of 1/2-20UNF-2A (coated) threads (ASA B1.1-1960).
26. Minimum flat.
27. This zone is controlled for automatic handling. The variation in actual diameter within the zone shall not exceed .010 in.
28. (Three leads) Dimension .016 min. and .019 max. applies between .050 max. and .250 min. Dimension .016 min. and .021 max. applies between .250 min. and 1.5 in. from seating plane. Diameter is uncontrolled in .050 max. and beyond 1.5 in. from seating plane.
29. Three Leads.

GRADE

- M – Military Grade Part, Ceramic Package Only. All Military Grades have been processed to MIL-STD-883 Level C, and are guaranteed to operate over military temperature range.
- N – Prime Grade Part, Ceramic Package.
- P – Prime Grade Part, Plastic Package.
- CN – Commercial Grade Part, Ceramic Package.
- CP – Commercial Grade Part, Plastic Package.
- K – Kit

N, P, CN and CP parts are electrically identical and guaranteed to operate over 0°C to +75°C range unless otherwise stated. In addition, N and P parts generally have operating parameters more tightly controlled than the CN or CP parts.

DEVICE NUMBER
This group of alpha numeric characters defines the device including functional and electrical characteristics, alpha suffixes are added to further delineate electrical options.

PACKAGE
One alpha suffix represents the basic package style.

- D – Dual In-line (Hermetic, Ceramic)
- F – Flatpak (Hermetic)
- H – Metal Package
- J – Dual In-Line (Side Brazed)
- K – Metal Power Package (TO-3)
- P – Dual In-Line (Molded)
- R – 8-lead DIP (Hermetic, Ceramic)
- S – Metal Package (Hybrid only)
- T – 8-lead DIP (Molded)
- U – Power Package (Molded, TO-220)
- U1 – Power Package (Molded)
- W – Molded Package (TO-92 Outline)

Different outlines exist within each package style to accommodate various die sizes and number of leads.

TEMPERATURE RANGE
One alpha suffix represents one of the following three basic temperature grades in common use. Exact values and conditions are specified on the device data sheets.

- C – Commercial
  0°C to +70/75°C
- M – Military
  -55°C to +125°C
  -55°C to +85°C
- V – Industrial
  -20°C to 85°C
  -40°C to +85°C

SERIAL NUMBER
This group consists of a two-digit serial number to indicate the type of circuit within the series.

VARIATION
Consists of a single letter which indicates the difference of outer appearance or some part of the device specifications as listed below.
(1) For linear circuits, this is one letter of the alphabet, chosen in alphabetical order but not including I or O, which is used to flag devices for which parts of the specifications differ.
(2) For devices with identical specifications having only pin bending direction differences, an R is assigned to this group.
(3) When this group designation is not required, the next group is shifted to the left to follow the group (4) immediately.

PACKAGE
- B – Resin sealed ceramic-type package
- K – Low melting point glass sealed ceramic-type package
- L – Plastic molded SIL (single-in-line) package
- P – Plastic molded DIL (dual in-line) package

DEVICE NUMBERING KEY

IC DEVICES

NEC PREFIX
Symbol indicating a semiconductor integrated circuit
(Abbreviation for MICRO PACK)

FAMILY
Symbol identifying one of the following type of circuits
A – Composite elements
B – Bipolar type digital circuit
C – Bipolar type analog circuit
D – Unipolar type digital circuit (MOS)

SERIAL NUMBER
Serial number assigned to each product for in-house registration
(based on major classifications by application)

PACKAGE
Symbol identifying one of the following types of packages
A – Metal can similar to TO-5
B – Flat pack (ceramic)
C – Dual in-line package (DIP) (plastic mold)
D – Dual in-line package (DIP) (ceramic)
G – Flat pack (plastic mold)
H – Single in-line package (SIP) (plastic mold)
J – Package similar to TO-92 (plastic mold)
M – MINI MOD Package (film-carrier type mold)
V – Vertical dual in-line package (VDIP)

DEVICE NUMBERING KEY

IC DEVICES

A basic number consists of:
THREE LETTERS FOLLOWED BY A SERIAL NUMBER

FAMILY
FIRST AND SECOND LETTER

1. DIGITAL FAMILY CIRCUITS
   The FIRST TWO LETTERS identify the FAMILY
2. SOLITARY CIRCUITS
   The FIRST LETTER divides the solitary circuits into:
   S-Solitary digital circuits
   T-Analogue circuits
   U-Mixed analogue/digital circuits
   The SECOND LETTER is a serial letter without any further significance except "H" which stands for hybrid circuits.
3. MICROPROCESSORS
   The FIRST TWO LETTERS identify microprocessors and correlated circuits as follows:
   - MA – Microcomputer Central processing unit
   - MB – Slice processor
   - MD – Correlated memories
   - ME – Other correlated circuits (interface, clock, peripheral controller, etc.)

TEMPERATURE RANGE
THIRD LETTER
It indicates the operating ambient temperature range.
The letters A to G give information about the temperature:

- A – temperature range not specified
- B – 0 to +70°C
- C – 55 to +125°C
- D – 25 to +70°C
- E – 25 to +85°C
- F – 40 to +85°C
- G – 55 to +85°C

If a circuit is published for another temperature range, the letter indicating a narrower temperature range may be used or the letter "A".

SERIAL NUMBER
This may be either a 4-digit number assigned by Pro Electron, or the serial number (which may be a combination of figures and letters) of an existing company type designation of the manufacturer.

To the basic type number may be added:

VERSION
Indicates a minor variant of the basic type or the package. Except for "Z", which means customized wiring, the letter has no fixed meaning. The following letters are recommended for package variants:

- C – for cylindrical
- D – for ceramic DIL
- F – for flat pack
- P – for plastic DIL
- Q – for QIL
- U – for uncased chip

PACKAGE
Alternatively a TWO LETTER SUFFIX may be used instead of a single package version letter, if the manufacturer (sponsor) wishes to give more information.

FIRST LETTER: General shape

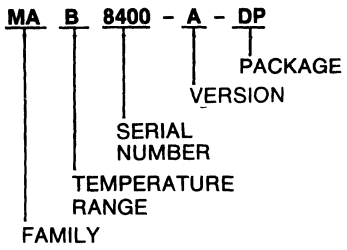
- C – Cylindrical
- D – Dual-in-line (DIL)
- E – Power DIL (with external heatsink)
- F – Flat (leads on 2 sides)
- G – Flat (leads on 4 sides)
- K – Diamond (TO-3 family)
- M – Multiple-in-line (except Dual-, Triple-, Quadruple-in-line)
- Q – Quadruple-in-line (QIL)
- R – Power QIL (with external heatsink)
- S – Single-in-line
- T – Triple-in-line

SECOND LETTER: Material

- C – Metal-ceramic
- G – Glass-ceramic (cerdip)
- M – Metal
- P – Plastic

A hyphen precedes the suffix to avoid confusion with a version letter.

EXAMPLE



IC DEVICES

FAMILY
PC – High speed CMOS

TEMPERATURE RANGE
54 – Extended temperature range –55°C to 125°C (Cerdip only)
74 – Standard temperature range –40°C to 85°C or –40°C to 125°C

TECHNOLOGY
HC – CMOS input switching levels; supply voltage 2V to 6V; fully buffered
HCT – TTL input switching levels; supply voltage 4.5V to 5.5V; fully buffered
HCU – CMOS input switching levels; supply voltage 2V to 6V; Unbuffered (Single stage device)

DEVICE NUMBER
Up to five digits

PACKAGE
D – Ceramic (Cerdip)
P – Plastic
T – Plastic mini-pack (SO)

DEVICE NUMBERING KEY

IC DEVICES

FAMILY

The code consists of three letters followed by a serial number

First two letters

A. Solitary circuits
The first letter identifies the circuit as:
S–Solitary digital circuit
T–Analog circuit
U–Mixed analog/digital circuit
The second letter has no special significance, except the letter H which stands for hybrid circuits.

B. Family circuits
These are digital circuits related in their specifications and primarily designed to be mutually connected.
The first two letters identify the family.

TEMPERATURE RANGE

The third letter: indicates the operational temperature range or exceptionally, another significant characteristic.

A – No temperature range specified
B – 0 to 70°C
C – 55 to 125°C
D – 25 to 70°C
E – 25 to 85°C
E – 25 to 85°C
F – 40 to 85°C

If a circuit is designed for a wider temperature range, but does not qualify for a higher classification, the code letter for the narrower temperature range is used.

SERIAL NUMBER

The serial number may either be a 4-digit number (assigned by PRO ELECTRON) or the serial number (combining figures and perhaps numbers) of an existing company number. Company numbers consisting of less than four digits are extended to a four-digit number by adding zeroes (0) in front.

VERSION

A version letter may be added to indicate a variation of the basic type. Thus, slight changes of the basic type or the package may be designated. Version-letters have no fixed significance with the exception of the letter Z: Connection as specified by customer ("customized wiring").

PACKAGE

FIRST LETTER: General shape

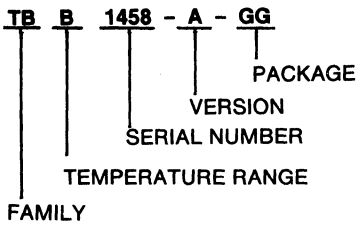
C–Cylindrical
D–Dual-in-line (DIL)
E–Power DIL (with external heatsink)
F–Flat (leads on 2 sides)
G–Flat (leads on 4 sides)
K–Diamond (TO-3 family)
M–Multiple-in-line (except Dual, Triple, Quadruple-in-line)
Q–Quadruple-in-line (QIL)
R–Power QIL (with external heatsink)
S–Single-in-line
T–Triple-in-line

SECOND LETTER: Material

C – Metal-ceramic
G – Glass-ceramic (cerdip)
M – Metal
P – Plastic

A hyphen precedes the suffix to avoid confusion with a version letter.

EXAMPLE



DEVICE NUMBERING KEY

FORMER IC PRODUCT CODE

FAMILY
First two letters: same as new code.
(Refer to SIEG "IC DEVICES")

FUNCTION
The third letter: indicates the function

H – Combinatorial circuit
J – Bistable or multistable sequential circuit (static)
K – Monostable sequential circuit
L – Level converter (dynamic)
N – Bi-metastable or multi-stable sequential circuit
Q – Read-write memory
R – Read-only memory
S – Sense amplifier with digital output
Y – Miscellaneous circuits not covered by H to S

SERIAL NUMBER/TEMPERATURE RANGE

The third digit (of the serial number of three digits) indicates the operating temperature range

0 – No temperature range specified
1 – 0 to 70°C
2 – –55 to 125°C
3 – –10 to 85°C
4 – 15 to 55°C
5 – –25 to 70°C
6 – –40 to 85°C

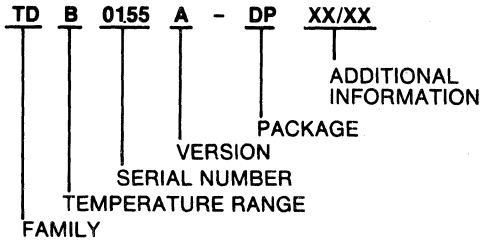
FAMILY
Three letters:
First: S – Digital IC
T – Analogue circuit
U – Mixed digital/Analogue circuit
Second: Any except A,B,C or H
Third: Operating Temperature range

TEMPERATURE RANGE
A – unspecified
B – 0°C to 70°C
C – 55°C to +125°C
D – 25°C to +70°C
E – 25°C to +85°C
F –40°C to +85°C

Second letter: material
B –Beryllia-ceramic
C –Ceramic
G –Glass-ceramic (Cerdip)
M – Metal
P –Plastic
X –Others

ADDITIONAL INFORMATION (OPTIONAL)
If necessary two numbers the first of them shows the number of leads.
The second, separated by a stroke is a serial number.

EXAMPLE



SERIAL NUMBER
At least four characters designating original source or Pro-Electron allocated number.

TYPE NUMBER

(A) – Advance Information – This information was derived from an advanced-release data sheet. Components may have not reached commercial production.

(1) A D.A.T.A.-assigned suffix to indicate that
(2) the device is also listed in another volume
(3) of the D.A.T.A. library.

Example:

Part No.	Volume	Category
74LS37DP (1)	Digital ICs	Gate
74LS37DP (2)	Interface ICs	Buffer

NOTES

The serial numbers of all DIPs, QUIPs, and SOs are the same as their pin count. The symbol to the right of any drawing number indicates that the dimensioned drawing is not yet available and that the serial number coincides with the pin count.

As processing and technology improve, many manufacturers refine their packages to offer new opportunities to component users. While the illustrations on the following pages are suitable for most reference, users requiring more accurate or more current packaging documentation are referred to their supplier.

All drawings shown are referenced in the Technical Sections of this D.A.T.A.BOOK and, with the exception of JEDEC-registered outlines, are reproduced from manufacturer literature. The "MO-" and "TO-" series drawings are reproduced from JEDEC Publication No. 95: JEDEC Registered and Standard Outlines for Solid State Products.

OUTLINE DRAWING COLUMN (Letter Prefix)

The outline drawings are arranged by package type, serial number and variations. The following is an example:

FL 16 a
Package Type Serial Variation

CH – Unpackaged Die or Chip
CN – Metallic Can
DIP – Dual-Inline Package (DIP)
FP – Flatpack and Small Outline (SO)
LC – Leaded and Leadless Chip Carriers (LDCC and LLCC)
MD – Proprietary Modular Package
MO – JEDEC-Registered MO-series Package
MS – JEDEC-Registered MS-series Package
QUIP – Quad-Inline Package (QUIP)
PGA – Pin Grid Array (PGA)
SL – Single-Inline Package (SIP)
TO – JEDEC-Registered TO-series Package

MAXIMUM FAN OUT (Per Circuit)

NOTE: Fan Out computed at rated output sink current, based on following unit loading factors:

a – 1.6mA (TTL unit load)
b – 2.0mA (S-TTL unit load)
c – .80mA
d – .36mA (LS-TTL unit load)
e – .18mA (L-TTL unit load)
f – 5.0pF U.L. (Prop delay specified at max. F.O.)
g – 250uA

Rate Multiplier

TYPE NUMBER The manufacturer designated type number for the device.
TECHNOLOGY The main bipolar or MOS semiconductor technology of the device.
TYPE CODE 1-digit numeric code representing type of divider. (See code listing.)
MODULUS MAX The maximum divide-by ratio of the device; for programmable MIN dividers the minimum modulus is also shown.
f MAX The maximum input frequency the device will reliably function at.
NO. OF STAGES Number of counting stages (i.e., flip-flops)
VIH MIN The least positive (most negative) value of high level input voltage for which operation of the logic element within specification limits is guaranteed.
VIL MAX The most positive (least negative) value of low level input voltage for which operation of the logic element within specification limits is guaranteed.
I_{OL} TEST The current into the output terminal with input conditions applied that, according to the product specification, will establish a low level at the output. The value shown is a test condition of V_{OL} MAX.
V_{OL} MAX The voltage level at the output terminal with input conditions applied that, according to the product specification, will establish a low level at the output.
SUPPLY VOLTAGE RATED, NEG The maximum allowable negative voltage (with respect to ground) that may be applied to the (–) supply terminal and still guarantee proper device operation.
SUPPLY VOLTAGE RATED, POS The maximum allowable positive voltage (with respect to ground) that may be applied to the (+) supply terminal and still guarantee proper device operation.
PD RATED MAX The maximum allowable power dissipation of the entire device.
TEMP LOW Minimum allowable ambient operating temperture.
TEMP HI Maximum allowable ambient operating temperature.

The IC Book of Job Security

Keeping up to date on IC technology...on product availability...and designing with state-of-the-art devices...are three ways to insure job security – and three essential ingredients your company needs to stay ahead of the competition.

D.A.T.A.'s IC D.A.T.A.BOOKS® provide this form of job security with the most complete overview of commercially available ICs. These easy-to-use product specific source guides let you make initial product selections using the basic design-in parameters required for your application. All product data is quickly accessed...current...and accurate. The specific product selection process is simplified with the assurance you have made the best possible choice.

Your company depends on you to make the right decisions. And you can depend on D.A.T.A.'s IC D.A.T.A.BOOKS ...they make the right component selection easy.

- Digital ICs
- Linear ICs
- Interface ICs
- Memory Devices
- Microprocessors

To order any one of the above IC D.A.T.A.BOOKS at only $75 each (6 month subscription; $110 for 12 months), call TOLL-FREE
